G DEVENDRA

Cybersecurity Enthusiast | B. Tech Student | Founder, RDCyberforge
9490362424 | devendragupta738226@gmail.com | LinkedIn | TryHackMe | GitHub

PROFESSIONAL SUMMARY

Aspiring SOC Analyst and Cybersecurity Professional pursuing B. Tech in Cyber Security with hands-on experience in VAPT, network monitoring, incident response, and security analysis. Founder of RDCyberforge, a cybersecurity training and community initiative. Familiar with SOC operations, SIEM concepts, threat detection, and Red Team/Blue Team methodologies. Skilled in Kali Linux, Nmap, Wireshark, Burp Suite, and Metasploit.

KEY SKILLS

Technical: Networking, Operating Systems, Network Security, Log Analysis, Incident Response, VAPT
Tools: Kali Linux, Nmap, Wireshark, Metasploitable, Burp Suite, Nikto, SQLmap, Dirb/Dirbuster, Wappalyzer, theHarvester, Subfinder
Soft Skills: Problem Solving, Teamwork, Communication, Presentation, Leadership, Event Management

EDUCATION

Bachelor of Technology (B. Tech) – Cyber Security
Sri Venkateshwara College of Engineering | CGPA: 7.5 | 2024 – 2028

FOUNDER & LEADERSHIP EXPERIENCE

Founder – RDCyberforge *22 Sep 2026 – Present*

- Founded RDCyberforge, a small cybersecurity-focused organisation dedicated to training, workshops, CTFs, and community events.
- Plan and conduct cybersecurity training sessions and hands-on workshops to help beginners build practical security skills.
- Organise Capture The Flag (CTF) competitions and technical events to encourage learning through real-world, challenge-based practice.

INTERNSHIP EXPERIENCE

Cybersecurity Intern (VAPT & Red Teaming) – Cyberwar Lab *March – April 2026*

- Performed VAPT on web applications and lab-based network targets, following a structured methodology across reconnaissance, scanning, enumeration, exploitation, and reporting phases.
- Carried out reconnaissance and scanning using Nmap and OSINT techniques to map target infrastructure, open ports, and running services before deeper analysis.
- Used Burp Suite to test web applications for common vulnerabilities (injection flaws, broken authentication, misconfigurations) and validated findings against OWASP Top 10 risk categories.
- Participated in simulated Red Team exercises and assisted Blue Team log analysis/incident response, gaining exposure to both offensive and defensive security perspectives.
- Documented identified vulnerabilities with severity ratings and mitigation recommendations, contributing to a mock security assessment report.

Cybersecurity + AI Intern – Woollemia Infosec *May 2026 – July 2026*

- Gained hands-on exposure to cybersecurity fundamentals, ethical hacking, VAPT, and practical security assessment methodologies.
- Performed network security assessment of Metasploitable 2 — reconnaissance, port scanning, service/version and OS detection, script execution, vulnerability identification, CVE mapping, CVSS severity assessment, and controlled exploitation.
- Conducted web application security testing using Burp Suite, Nikto, SQLmap, Dirb/Dirbuster, and Wappalyzer, covering information gathering, authentication/session management, injection testing, security headers, TLS/SSL configuration, and directory enumeration.
- Identified and documented security issues including HTML Injection, Clickjacking, insecure security headers, session/cookie security weaknesses, and vulnerable software versions.
- Worked with AI-assisted tools (ChatGPT, Claude, GitHub Copilot, Burp Suite AI extensions) to support security research, vulnerability analysis, and report preparation.
- Prepared professional Network Security and Web Application Security Assessment reports documenting methodologies, findings, risk severity, evidence, and remediation recommendations.
- Practiced Linux fundamentals, OSINT, Nmap scanning, CVE research, password security, OWASP Top 10 concepts, social engineering awareness, and basic security hardening.

PROJECTS

Banking Application (Python CLI)

- Developed a command-line banking system with balance check, deposit, and withdrawal features using Python functions.
- Simulated real-world banking operations with structured transaction logic.

Network Security Assessment

- Conducted a structured network assessment covering reconnaissance, port scanning, and service enumeration.
- Performed vulnerability analysis, CVE mapping, CVSS assessment, and controlled exploitation.

Web Application Security Assessment

- Carried out a structured web application assessment covering reconnaissance, vulnerability testing, authentication, and session management.
- Reviewed security headers and SSL/TLS configuration and analysed identified vulnerabilities.

CERTIFICATIONS

- Networking & Cybersecurity – Supraja Technologies
- Cybersecurity + AI Internship – Woollemia Infosec

EXTRA-CURRICULAR ACTIVITIES

- Participated in Ethical Hacking workshops, cybersecurity seminars, webinars, and technical events to stay updated with industry trends.
- Hands-on labs on TryHackMe and Hack the Box covering offensive/defensive security, SOC concepts, and tools including Nmap, theHarvester, Subfinder, Wireshark, and Wappalyzer.
